To whom it may concern,

Sand on Demand is a company that were employed recently by our club to carry out much needed maintenance on our plating pitch.

This involved vertidrainning, through spiking the entire surface of the field and then applying 150 tonnes of sand, with specialised spreading equipment that evenly distributed and worked the sand into the pitch.

This work was completed approx. two weeks ago and the results have been very satisfactory. The playing surface is much better than prior to the work being carried out. Despite some heavy showers, that would have previously rendered the pitch unplayable, we were able to continue training sessions without disruption.

I have no hesitation in recommending Sand on Demand to any club that is considering this type of maintenance for their pitch. Our club is open to anyone that wishes to view the results of the work that has been carried out by Sand on Demand.
